

WCABP Research Fund

The WCABP created a Fund three years ago with the objective of providing financial support to research projects that are dedicated to investigating diseases and management practices that are relevant to beef and dairy cattle production in Western Canada. This competition was open to researchers and their attendant graduate students, associated with a bona fide university located in Western Canada. The field or subject of research must be shown to be directly applicable to beef and dairy practice, with preference given to applied research and research conducted by research veterinarians and their graduate students.

To date, the following individuals have been the recipients of the \$3,000 Research Fund:

2008 - No applications received

2007 - Nathan Erickson, Large Animal Clinical Sciences (WCVM) – “Mycoplasma bovis”

2006 - Colin Palmer, Large Animal Clinical Sciences (WCVM) – “Evaluation of the Use of Benzathine Cephapirin in Both Clinically Normal and Endometritis-Positive Postpartum Dairy Cows Examined Using Ultrasonography and the Endometrial Cytobrush
